Prediction using decision tree algorithm

Author : BADAR IFTIKHAR

Importing Libraries

```
# Importing libraries in Python
import sklearn.datasets as datasets
import pandas as pd
```

Loading the dataset

```
iris=datasets.load_iris()
```

Forming the iris dataset

```
# Forming the iris dataframe
df=pd.DataFrame(iris.data, columns=iris.feature_names)
print(df.head(5))

y=iris.target
print(y)
```

```
   sepal length (cm)  sepal width (cm)  petal length (cm)  petal width (cm)
0                5.1               3.5                1.4               0.2
1                4.9               3.0                1.4               0.2
2                4.7               3.2                1.3               0.2
3                4.6               3.1                1.5               0.2

Defining decision tree algorithm

```
# Defining the decision tree algorithm
from sklearn.tree import DecisionTreeClassifier
```

```
dtree=DecisionTreeClassifier()
dtree.fit(df,y)

print('Decision Tree Classifer Created')
```

```
Decision Tree Classifer Created
```

Visualize decision tree algorithm

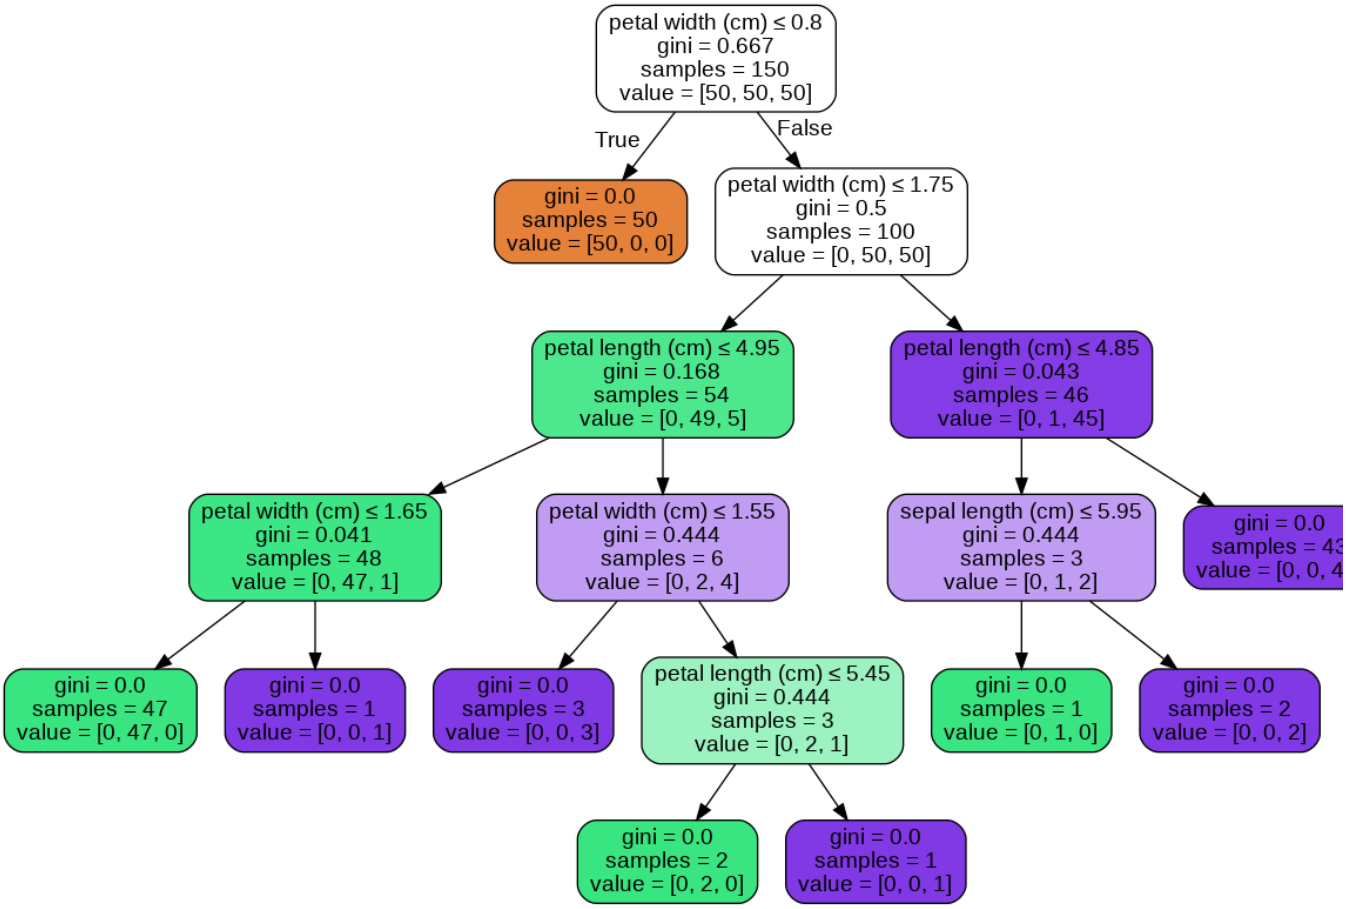
```
# Install required libraries
!pip install pydotplus
!apt-get install graphviz -y
```

```
Requirement already satisfied: pydotplus in /usr/local/lib/python3.7/dist-packages (2.0
Requirement already satisfied: pyparsing>=2.0.1 in /usr/local/lib/python3.7/dist-package
Reading package lists... Done
Building dependency tree
Reading state information... Done
graphviz is already the newest version (2.40.1-2).
0 upgraded, 0 newly installed, 0 to remove and 37 not upgraded.
```

```
# Import necessary libraries for graph viz
from sklearn.externals.six import StringIO
from IPython.display import Image
from sklearn.tree import export_graphviz
import pydotplus

# Visualize the graph
dot_data = StringIO()
export_graphviz(dtree, out_file=dot_data, feature_names=iris.feature_names,
                filled=True, rounded=True,
                special_characters=True)
graph = pydotplus.graph_from_dot_data(dot_data.getvalue())
Image(graph.create_png())
```

```
/usr/local/lib/python3.7/dist-packages/sklearn/externals/six.py:31: FutureWarning: The m
  "(https://pypi.org/project/six/).", FutureWarning)
```



You can now feed any new/test data to this classifer and it would be able to predict the right class accordingly.
